ABOUT US

Since 1988, **Outils** has been working with tungsten carbide, better known as hard metal or widia metal, and tungsten alloys.

Providing advice through a solid team of senior managers with strong professional experience in the research industry, is a key step for us to understand our partners; the second step is the understanding that exists between us and our customers, by sharing information, points of view and problems.

In fact, the company's mission is to research and implement innovative products that bring new business or improve what is already present in the customer's business, thus offering them more competitiveness.

PRODUCTS

When it comes to its products, **Outils** guarantees high quality standards, thanks to accurate checks carried out on each lot, from the smallest detail, to large sizes, single or standard productions up to large series.

In reality, there is no real product standard as such, given the very technical and specific nature of the details; we are certainly available to discuss any technical need with you.

In fact, every request is experienced by us not only as business, but as a new opportunity for growth.

Of course, all this involves an extensive and ongoing study on our part of new materials, and numerous tests until the final result, which to date has proven to bring great satisfaction.
